

## **An Important Update for Users of the Nebraska ASAP Infection and Antibiotic Tracking Tool**

Thank you for using the Nebraska ASAP Infection and Antibiotic Use Tracking Tool. **Version 2** was released on July 16, and it includes an important update.

**Version 2** corrects an issue with the display of charts and graphs after 100 entries. First and foremost, **this bug does not impact any of the data you have already entered.** To ensure the tool provides complete tables and graphs, download **Version 2** and move your data - it is a simple copy-and-paste process:

1. Download the new Version 2 file.
2. Copy all of your data from the following tabs in the original file:
  - Resident Days Present
  - Data
  - Dropdowns (if you entered custom Provider names)
3. Paste this data into the corresponding tabs and columns in Version 2 (e.g., Resident Name to Resident Name).
4. Begin using Version 2 for all future data entry.

Version 2 also “freezes” the Resident information on the left and the column headers to improve the data entry experience. If you experience any challenges moving your data or have other questions, please contact Dan German at [dgerman@nebraskamed.com](mailto:dgerman@nebraskamed.com).

Please let me know if you have any questions, and thanks again!

**Dan German**
