Infections of the urinary tract, respiratory tract, and skin and soft-tissues are the most common infectious conditions affecting patients across diverse healthcare settings. Unfortunately, inappropriate antibiotic prescribing for these infections is common and can result in sub-optimal patient outcomes, the development of antimicrobial resistance, and serious adverse reactions such as *Clostridioides difficile* infection. This educational event is designed to apply the principles of antimicrobial stewardship to the management of these common infections with a goal of improved antimicrobial use and patient outcomes. Strategies to support implementing these best practices will also be discussed.

**Target Audience**

**Outpatient facilities and acute care hospitals:** Nurses and providers in family medicine, internal medicine, and ambulatory care

**Post-acute and long-term care facilities:** Long-term care providers, medical directors, and nurses

**NOTE:** Attendees of the 2019 Nebraska Antimicrobial Stewardship Summit (5/31 - Omaha) should not attend this event as the content is duplicative.

**Learning Objectives**

At the conclusion of the meeting, participants should be better able to:

1. Outline current management strategies for common infections encountered in outpatient, inpatient and long-term care facilities
2. Explain how antibiotic stewardship can help healthcare facilities and practitioners improve management of common infections
3. Describe how to utilize antibiotic stewardship tools to promote appropriate management of these common infections

**For More Information**

Please contact the following if you have questions regarding:

**REGISTRATION** Brenda Ram, CMP, CHCP at 402-559-9250 or email bram@unmc.edu

**MEETING CONTENT** Philip Chung, PharmD, MS, BCPS, BCIDP at 402-552-7636 or email pchung@nebraskamed.com

**Registration Information**

Registration fee is $20. Space is limited. Early registration is encouraged.
